

CEO's Message November 2025

Intelligence

We're in the age of collective intelligence, where success depends on collaboration. This is the 'why' behind our focus on collaborative learning.

The human teacher's role is critical: to humanize the child. They focus on essential life skills—emotional intelligence, character, and values—qualities AI cannot teach.

Humanoids handle content delivery and assessment efficiently. This frees the teacher and empowers the student to be an active learner, driven by agency, purpose, and innovation. This dynamic partnership ensures we are not just teaching subjects, but developing whole, capable individuals ready to thrive in the complex world of tomorrow.
